

# Ist1111237 - Francisco Barreiras Santos

The concept map above pertains to the concepts of Digital Transformation, Enterprise Architecture and Technical Debt, establishing relations between them and defining how they can be intertwined and co-exist in large-scale organisations.

Digital Transformation is at the heart of this map and some of its most common forms include the use of AI, the implementation of Hyperautomation and migration to Cloud Services or a Hybrid Cloud, both of which benefit from following a Cloud Adoption Framework. Digital Transformation relies heavily on Technology Research and all of its breakthroughs, with the philosophy of Enterprise Architecture contributing to it. Finally, Digital Transformation helps reduce and prevent Technical Debt, adding to a company's Value Proposition.
