

The concept map integrates [401] Enterprise Architecture as the foundation supporting [410] Digital Transformation by facilitating advanced technologies and processes. [460] Technical Debt represents the compromises in system design or development. It is managed within [401] Enterprise Architecture to secure long-term system sustainability. [200] Governance of IT aligns [400] IT strategies like [410] Digital Transformation with business strategies ([120] Strategy), ensuring operational alignment with technologies such as [310] OT and [210] EIM. [320] Continuity ensures resilience during transformative stages. [440] Electronic Identification and [480] Artificial Intelligence are pivotal in enhancing digital services and security measures in the architectural framework.
