Conceptual Map

[300] IT Service Management (ITSM) is at the core of this Cmap, with [303] SLA setting service and security standards, enforced by [382] SecOps and automated by [383] DevSecOps, for robust security integration. These standards bolster the [381] DevOps framework, whose agile practices enhance [343] Project Management. [343] Project Management plans, executes, and monitors [342] Projects, which refine [300] ITSM processes and support [321] Business Continuity strategies. It also utilizes [310] Operational Technology (OT) to optimize process control. [310] OT supports crucial operations in [321] Business Continuity, ensuring [300] ITSM's service continuity. [322] BIA plays a key role, identifying critical areas and guiding resource allocation to maintain service during disruptions.
