

The concept map centers on the governance and management of IT, starting with Governance of IT, which ensures adherence to legal and regulatory standards. This foundational governance supports Business Continuity and Project Management, establishing a framework within which these processes operate. Responsibility within the organization is assessed and controlled by BoD, ensuring effective oversight. Project Management is influenced by and utilizes Compliance, which also supports Management, essential for operational success. This management function enhances Strategy, which guides IT Service Management. Lastly, Stakeholder input is crucial for project management, emphasizing the interconnectedness of these elements in sustaining organizational objectives and compliance.
