[400] IT Strategy outlines how an organization plans to use Information Technology (IT) to achieve its goals and objectives. This takes into account compliance and shapes how a company will manage IT Services.

[300] IT Service Management sets up requirements and good practices for the management system. These are influenced by compliance and set the quality of the company. It is used in [343] Project Management to manage the [342] Projects, which are endeavors to achieve one or more defined objectives.

[321] Business continuity is the capability to continue the delivery of Deliverables within acceptable time frames during a disruption.

This is affected by [142] Risk as this causes disruptions. These are mitigated by [140] Risk Management which is reinforced by [130] Compliance.
