

Textual description

Enterprise architecture is as a foundation for IT strategy, digital transformation, and managing technical debt, while hyperautomation streamlines business processes. Digital transformation is enabled by cloud services and guided by a cloud adoption framework. IT strategy is informed by technological research and can be supported by consultants. Hyperautomation tools can be hosted on cloud services, and technology research helps organizations stay competitive. The cloud adoption framework aligns with IT strategy, and consultants provide guidance throughout the adoption process. Talent management plays a critical role in digital transformation and ensures that the organization has the necessary skills, while consultants offer expertise in various areas.
