

## Leon Bieker – ist1111579

At the core, [300] IT Service Management ensures robust governance and efficient service delivery. It connects directly with [343] Project Management, which is essential for aligning IT projects with business goals, and [321] Business Continuity, which guarantees the resilience of IT operations. [250] Cybersecurity is fundamental, protecting all data and systems. [310] Operational Technology integrates traditional IT with operational systems, crucial for crisis management. [322] Business Impact Analysis supports Business Continuity by identifying potential effects of operational disruptions. The relationships with [303] Service Level Agreement, [384] FinOps, and [389] XOps emphasize the necessity of service quality, financial optimization, and operational efficiency across IT practices.
