

# 100227 - Maria Isabel Moita Portugal

Enterprise Architecture is a critical factor in Digital Transformation, facilitating this process and mitigating potential Technical Debt. It also serves as a guiding force for Governance of IT, ensuring that technological decisions align with organizational objectives. The role of Digital Transformation is crucial in engaging stakeholders and securing sponsorship from top management. This alignment is further reinforced by the connection between Stakeholders and Projects. IT Strategy emerges as a central component, informing both project implementation and addressing technical debt. Its connection to both Enterprise Architecture and Digital Transformation underscores its role in shaping technological initiatives in alignment with overarching business strategies.
