Concept Map:

Description:

A project contributes to Business Continuity of the business organization as long as is delivered on time, that part is directed and controlled by the Project Management. The Chief Operating Officer oversees the business and uses monitoring Key Performance Indicators (KPIs) for efficiency. Project Management ensures successful project execution using the practices and processes created by the IT Service Management. DevOps, XOps and FinOps optimize workflows for agility. All these concepts intersect in maintaining processes, good decision making, efficiency, continuity and innovation in business operations.
