

Marco Castro - ist199104

[401] Enterprise Architecture, supported in development and maintenance by [402] Knowledge Management, has a need of [420] Competence that is defined by [421] Competence Framework, that is then used as a reference by [423] Talent Management to obtain skilled enough people in [410] Digital Transformation and [442] IAM

[410] Digital Transformation with skilled people gathered from [423] Talent Management will address any [460] Technical Debt that could happen from digital optimization

[442] IAM, being a component of [401] Enterprise Architecture, ensures secure access to resources within an organization's IT environment, as well as some [410] Digital Transformation components, such as [443] Digital Wallet, by verifying a certain person's [440] Electronic Identification before giving access
