

The concept map connects [401] Enterprise Architecture (EA), [410] Digital Transformation, [450] Technical Debt, and other key concepts. EA guides Digital Transformation, which can lead to Technical Debt if mismanaged. Both EA and Digital Transformation require strategic planning and effective information management. Identity and Access Management supports Privacy principles and manages Electronic Identification. Consultants advise on EA and manage Technical Debt, which can hinder EA's optimal design. The map emphasizes the importance of strategic planning, information management, and careful technical change consideration during digital transformation.
