

This concept map explores how governance, culture, compliance, risk management, and accountability work together. Governance sets the framework with rules and processes. Corporate culture, shaped by governance, influences ethical behavior and decision-making. Effective governance and a strong culture drive compliance. Risk management, a core governance function, informs decisions and ensures compliance. Ethical behavior minimizes risks and strengthens culture. Transparent decision-making fosters accountability and reduces risks. Stakeholders are impacted by and influence these practices, holding the organization accountable. The external environment can introduce new risks addressed

I used two AI chatbots, Chatgpt and Gemini to provide a comprehensive picture of these concepts. I did an iteration where the given text was put to both chatbots and the results were combined by them. The picture of the concept map was done by chatgpt. I think the results could be more enhanced if i would have given more my own thoughts rather than just text from the assignments.
