

Enterprise Architecture defines the use of **Technology** for **Projects** (also defines them to improve the organization's transformation) and provides a roadmap for **Digital Transformation**. **Digital Transformation**, fueled by **Innovation**, drives the need for **Enterprise Architecture** and improves both **Speed** and **Efficiency**, the second ensuring **Business Continuity** and the second being one of the main reasons for the **Technical Dept**. **Technical Dept** negatively impacts **Digital Transformation** and can be managed by **Enterprise Architecture** and **Risk Management**. **Risk Management** mitigates risk associated with **Innovation** and **Digital Transformation** to ensure **Business Continuity** as well.
