

[400] IT Strategy underpins all technological and architectural decisions within an organization. It guides the [401] Enterprise Architecture to align IT initiatives with business goals, shaping decisions in [410] Digital Transformation that can lead to [460] Technical Debt when prioritizing speed over perfection. This debt is managed through strategies defined by the [459] Cloud Adoption Framework, which also optimizes [450] Cloud Services to support broader digital initiatives. Meanwhile, [442] Identity and Access Management ensures security across systems, pivotal in managing access and protecting digital assets like [443] Digital Wallets.
