

Enterprise Architecture (EA) is influenced by Knowledge Management (KM) and IT Strategy (BS), which are crucial for structuring enterprise operations. KM is enhanced by Talent Management (TM) and optimized through Technology Research (TR). Digital Transformation (DT) is driven by EA and shaped by TR, but it is also linked to increased Technical Debt (TD) and is supported by IT Strategy. Change Management (CM) and Innovation Management (IM) play vital roles in adapting and enhancing these frameworks, respectively. IM not only introduces changes to KM but also stimulates TR and can accelerate the accrual of TD. Regulatory Compliance (RC) validates both EA and DT, ensuring alignment with legal standards.
