

IT Service Management establishes a set of Practices, used in Project Management and overseen Projects, which can use DevOps in their development. DevOps helps collaboration within an organization and IT Service Management. Business Continuity, together with DevOps, aims to reduce Disruption (which introduces uncertainty in a business) and relies on Business Impact Analysis, auxiliated by Risk Management, to analyze Disruption and Practices to reduce associated consequences and effects. Finally, KPIs are very useful for measuring the efficiency of DevOps, helping quantify Disruption impact, tracking the progress of Project Management and its Projects, and helping Risk Management and Business Impact Analysis.
