

The concept map illustrates the organizational hierarchy and interconnectedness of key functions and roles within an enterprise. The Chief Operating Officer (COO) oversees all operations, ensuring efficiency and effectiveness. DevOps and DevSecOps integrate development, operations, and security practices, while Project Management tracks progress and Key Performance Indicators (KPIs) measure performance. Service Level Agreements (SLAs) ensure service quality, and Business Continuity planning safeguards operations. IT Service Management manages IT services, ensuring alignment with business objectives. SecOps protects against security threats. This holistic view demonstrates the integration and coordination required for successful organizational management.
