

## 1. Concept Map

## Description of Concept Map

**Digital Transformation** is supported by **Enterprise Architecture** that must be updated to leverage new technologies. **Cloud Services** are required for the scalability and flexibility for **Digital Transformation** and must comply with **eIDAS** to ensure secure digital identities. **Identity and Access Management** including **Electronic Identification** is vital to **Cybersecurity** protect systems and data crucial for **Digital Transformation**. These elements help reduce **Technical Debt** updating outdated systems impacting **Enterprise Architecture**. Reducing **Technical Debt** is essential for a resilient architecture. **Data Protection** is critical for **Cloud Services** and **Digital Transformation** aligning with **eIDAS**. **Compliance** includes adhering to data protection laws which is essential for **Digital Transformation** initiatives.
