Concept Map

The [400] IT Strategy aligns business goals with IT investments, guiding the [401] Enterprise Architecture's proactive response to disruptive forces like [410] Digital Transformation. However, prioritizing speed may lead to [460] Technical Debt. To mitigate this, [450] Cloud Service is adopted, with access control ensured by [442] IAM. Meanwhile, [402] Knowledge Management enables the creation and distribution of organizational knowledge, supporting skill development in [420] Competence (HR), which is critical for successful digital transformation. Additionally, [480] Artificial Intelligence optimizes decision-making in Enterprise Architecture, and this can be accelerated using [430] Hyperautomation, a disciplined approach to automating business and IT processes.
