

Key enablers of successful Digital Transformation (DT) [210] include Hyperautomation [430] and Identity and Access Management [442]. The foundation for DT is laid by Enterprise Architecture (EA) [401], which dictates the overall transformation strategy. Managing Technical Debt [450] is crucial as it can hinder progress. Additionally, eIDAS [449], a European regulation, needs to be considered within IAM [442] to ensure secure interactions. IAM [442] utilizes Electronic Identification [440] to manage access, and Artificial Intelligence [480] enhances Hyperautomation's [430] capabilities. The Cloud Adoption Framework [459] is a specific strategy within DT, aimed at achieving cloud services [450].
