401] Enterprise Architecture delivers value by presenting recommendations to achieve Objectives. It supports digital transformation.

[410] Digital Transformation exploits digital technologies to reach objectives in a more efficient way. This includes [430] Hyperautomation, applying [480] Artificial Inteligence and applying [450] Cloud services. It takes into account the [400] IT Strategy, which outlines how a company plans to use IT on its business. [410] Digital Transformation also improves [402] Knowledge management as toolsthat provide access to organizational knowledge, which improves the efficiency and in turn the [491] Value Proposition of the company.

[460] Technical debt is the cost of not fixing problems right away, which increises over time, but is used to deliver results faster.
