Number: 99238

Concept Map

AI enables innovation during Digital Transformation (DT) by providing advanced capabilities for automation, pattern recognition and others. DT accelerates the adoption of Hyperautomation, impacts the implementation of IAM and due to its rapid changes, may lead to Technical Debt. It also drives the evolution of IT Strategy that enables the development and implementation of Enterprise Architecture (EA). EA guides the implementation of Hyperautomation, considers the integration of Hybrid Cloud which is guided by CAF and influences decisions related to IAM and CAF while relying on a effective HR to support its implementation, in which their decisions such as the adoption of Hybrid Cloud can lead to Technical debt. Consequently, having a good HR plays a crucial role in addressing this problem.
