Textual Description

EA is the process by which organizations organize IT infrastructure to align with business goals, not only supporting **digital transformation,** but also **IT Strategy**.
Cloud Service is core to **digital transformation** efforts, offering flexibility and scalability, and is guided by **CAF**, which is also relevant for **digital transformation** since it provides methodologies for planning and executing cloud adoption. **Hyperautomation** drives process efficiency and can use **AI**.
AI can also identify, manage, and mitigate **technical debt**(code debt) by analyzing code and predicting future issues while **technology research** conducts analysis to understand and address **technical debt** within the tech landscape.
Skills and knowledge are crucial for managing and resolving **technical debt** effectively.
