[401] Enterprise Architecture is the way you organize IT infrastructure to align with business goals. [401] EA adjusts the way [342] Projects are executed in order to limit [460] Technical Debt. This is done, in some businesses, by providing a blueprint for [410] Digital Transformation. One common example is migrating to [450] Cloud Service which should be guided by [459] Cloud Adoption Framework in order to reduce [460] Technical Debt incurred from unwise implementation choices. Further, one can employ [498] Technology Research to inform the [401] EA by taking into account disruptions such as [480] AI. Also [442] IAM is also important to ensure security. All in all, these things are done to find the right [400] IT Strategy and align the business with it.
