The [400] IT strategy is essential for the alignment of the business goals and the orginzation's IT structure. The strategy becomes clear through the [401] Enterprise architecture of the business together with the [402] Knowledge management which is a critical component for making informed decisions. The EA's goal is to highlight the needed [410] Digital transformations, to minimize the [460] Technical Depth, by evaluating the [499] TRL. The IAM preserves the digital identities during the transformations. The [421] Competence Framework ensures any necessary skills needed for implementation. [430] Hyperautomation is a method used to modernize and reduce the complexity of business processes. It uses [450] Cloud Services to enhance efficiency and eventually reduce the [460] Technical Depth.
