# Leon Bieker – ist111579

The Concept Map illustrates the interconnections between key IT strategy concepts, focusing on Identity and Access Management (IAM) and its implications for digital platforms. [401] Enterprise Architecture supports [410] Digital Transformation by enabling planning and implementation of initiatives. [444] CIAM (Customer Identity and Access Management) and [442] IAM facilitate secure user interaction, crucial for [443] Digital Wallets, which are susceptible to [460] Technical Debt if poorly managed. [449] eIDAS emphasizes regulatory impacts on electronic identification, linking with [440] Electronic Identification to ensure standardization. Decisions in IAM can contribute to technical debt, influencing digital transformation efforts.
